

LHDA Drives Impact at the Prime Minister's Annual Education Charity Golf Day

The Lesotho Highlands Development Authority (LHDA) proudly participated in the Prime Minister's Annual Education Charity Golf Tournament held at the Maseru Golf Club on 27 March 2026, reaffirming its commitment to Corporate Social Investment (CSI) and national development priorities.

The LHDA sponsored and participated in the tournament with a total contribution of M75,000.00, comprising M50,000.00 for tournament participation and a further M25,000.00 pledged in support of the education charity drive. This contribution reflects the Authority's deliberate investment in initiatives that promote inclusive access to education and social development.

Represented by a fourball selected from the LHDA Golfers Team, the Authority joined other stakeholders from across sectors in support of improving educational opportunities for vulnerable and disadvantaged children. Proceeds from the initiative contribute towards the provision of assistive devices for children with disabilities, as well as essential learning materials for learners in need—interventions that directly align with LHDA's CSI priorities of education development, livelihood improvement, and social inclusion.

On the course, the LHDA team delivered a strong and spirited performance, making the tournament both competitive and enjoyable. Beyond the game itself, the event created a valuable platform for stakeholder engagement, strengthening LHDA's institutional presence and reinforcing its role as an active contributor to national development.

Participation in this initiative underscores LHDA's impact beyond infrastructure delivery. It reflects a broader organisational commitment to building inclusive communities and supporting national efforts that shape the future of Basotho.

As LHDA continues its journey towards 40 years of impact, engagements such as these demonstrate that the Authority remains firmly aligned with the country's developmental priorities—investing not only in water and energy infrastructure, but also in people.
